

NOVEMBER

At Home Family Math Fun!

Focus: 100s chart!

Your family is receiving a 100s chart today!

Have fun completing these tasks with your family!

TASK

Each person in your family will put their initials on the number that represents their age. For example, if Chelsie Smith is 37 years old. She will write C.S. on the number 37.

Now try this...

Add up all of the ages of the children in your home and find the sum!
The SUM is the answer to an addition problem.

Our family's SUM for the ages of the children in our home
is _____!

Family Discussion:

- What do you notice about your sum?
- What do you notice about the ages of the adults when compared to the ages of the children?

Keep this 100s chart at home for the next month's activities!
